

# Directions for Use Guide for Mikro® Clean Pet

## Product Overview

Mikro® Clean Pet is a safe, natural and effective 2-in-1 deodorizing cleaner designed specifically for indoor and outdoor use. It's packed with probiotics and works by digesting odour-causing residues, leaving pet areas fresh and clean. Other chemical-based cleaners will not break down odour causing elements like uric acid crystals trapped in fabrics or soil resulting in the odour returning after treatment.

## Product Usage Guide

Apply Mikro® Clean Pet directly to pet bedding, mattresses, furniture, floors (carpet, vinyl, tile and hardwood), artificial turf and outdoor surfaces.

It is effective for:

- Cleaning to remove faeces, urine and hormonal residues, reducing the likelihood of pets re-soiling treated areas.
- Deodorizing to combat pet smells.

## Application Directions

### Deodorizing Pet Spaces (e.g. Litter Tray, Bedding, Soft Furnishings, Room and Hard Surfaces)

1. Spray directly from the bottle onto the surface and into the airspace around the pet area.
2. Direct application onto cat litter will enhance odour absorption.

### Removal of Urine and Faeces Stains and Odours (e.g. Carpets, Rugs, Fabric, Hard Surfaces)

1. Wash old stains with water.
2. Blot or remove fresh urine or faeces.
3. Spray the area liberally with Mikro® Clean Pet.
4. The stain and odour will disappear as the area air dries.

**Pro tip:** We also recommend cleaning the surrounding areas with Mikro® Clean Ultra. This powerful natural probiotic cleaner is pet-safe and will clean the area and enhance the odour control potency for an even fresher and odour free result.

## Artificial Turf Deep Treatment

This initial deep treatment of heavily soiled outdoor surfaces using the combined power of Mikro® Clean Pet stain and odour remover and natural disinfectant.

- 1) Prepare surface area before commencing treatment by removing all visible surface debris.
- 2) Recommended to use an artificial turf rake to unlock embedded debris and return grass blades to an upright position, allowing liquids to seep into the substrate.
- 3) Apply the probiotic solution generously so that it saturates down to the source of the odour in the substrate.
- 4) Allow to soak and air dry naturally.

**Note:** Recommended to apply at sunset being the coolest time of day, to avoid premature evaporation.

**On-going maintenance:**

**Note:** Frequency of maintenance treatments depends on how many pets use the area as their primary toilet.

In warm/hot seasons - fortnightly maintenance is recommended.

In cooler seasons - 4-6 weeks maintenance is recommended.

Regular watering down between treatments is recommended.

**Application Rate:**

- 1 litre per 1m<sup>2</sup> of Mikro® Clean Pet applied with a fine spray bottle.

**Storage Instructions**

- Temperature: Store in a shaded place. Do not freeze.

- Container: Keep container closed and free of debris when not in use.

- Handling: Do not shake the product. Mikro® Clean Pet is a fermented product; colour and odour may vary with storage.

**Warnings and Precautions**

- For External Use Only: Do not ingest. If accidentally ingested, call a poison control centre immediately.

- Avoid Contact with Eyes and Skin: If contact occurs, rinse thoroughly with clean water to avoid irritation.

- Ventilation: Use in a well-ventilated area.

- Disposal: Follow all local regulations for disposal.

- Label Compliance: Only use this product as directed on this label.

**Note:** This product has a natural earthy aroma that fades quickly after application.
